Response to Paper 01AE

The paper has adequately discussed the two neurological disorders namely Huntington's disease and Schizencephaly that occurs during development and their effects on development. The inclusion of a real life experience makes the discussions even better. However, suggest that you name the disorders before discussing each of them in separate sub-headings. For instance, you can start by stating, "the two neurological disorders to be discussed in this paper are....." This is very important in ensuring that the paper is more organized for readers. In addition, you have discussed the impacts of each neurological disorder as required in the question; however, you have not related the discussions on impacts with the recommended resource titled "Development across the life span" (Feldman, 2014). As a result, I suggest that you should also use this book in your discussion on the impacts of these disorders on development. This is not difficult because the impacts you have stated including delay in growth loss of intellectual faculties are be resembled to causes of conditioning that may occur to hinder the organism from responding to a particular neutral stimulus that normally brings about that type of response that might lead to growth (Feldman, 2014). It also hinders people from knowing, understanding, and thinking about the world (Feldman, 2014).

On the issue of spiritual discipline, your discussion is adequate as you have indicate research suggestions, which are correctly and adequately linked with the biblical principles of getting peace in God and mind renewal. This implies that you have really indicated the link between spiritual disciplines like prayer and meditation and neurology. However, I suggest that you also use Roehlkepartain et al., (2005), a recommended resource.

PAPER 02 JS

In general, the paper is well structured with headings and subheadings starting from neurology disorder to spiritual disciplines. The two neurological disorders are named, discussed and their impacts on development outlined. However, I suggest that you include the causes especially on Down's syndrome, and if hereditary be stated and even state possible treatment measures. On Cerebral Palsy, suggest you include more information on factors that might cause damage to the motor control center during pregnancy. In addition, using Wikipedia sources in discussing their impacts weakens the strengths of this paper. As a result, I suggest that the impacts of such neurological disorders should be discussed using reliable sources like Feldman (2014). This is not difficult, because the issues of damaged motor control centers, difficulties in understanding and slower development of cognitive skills as discussed in your paper can easily be linked to Feldman (2014).

Your discussions on the effects of spiritual disciplines including prayer and meditation are well discussed. The biblical principle stated in John 14:13 and Psalm 104:34 adequately link with the effects of prayer and meditation on neurology. However, I suggest that more information on the impacts of spiritual disciplines in terms of coping skills for those facing neurological disorders. In addition, it is better to start by stating what the meaning of prayer and meditation is before going deeper to identify their individual effects to neurology. In addition, the paper can be strengthened by using recommended books like Roehlkepartain et al. (2005), other than website materials like Andrewnewberg.com, which are not credible source of information.
